

The AutoParc volumes are based on vehicle sales by model into licensing districts over the last 30 years. Vehicles outside of the 30 year PARC represent about 0.3% of the annual PARC volumes.

A scrapping factor by year is applied to the model and licensing district volumes. The national PARC volumes are comparable to the NATIS system.

The PARC volumes include only those manufacturers that provide detailed sales figures.

Available Reports:

- VIN Validation by first 10 digits
